

CLAIMS:

1. A flame retardant silicone composition comprising
(A) 100 parts by weight of an organopolysiloxane
5 having at least one lower alkenyl group in a molecule,
represented by the following general formula (1):

- 10 wherein R is a lower alkenyl group, R^i is a substituted or
unsubstituted monovalent hydrocarbon group free of aliphatic
unsaturation, "a" is a positive number of 0.0001 to 0.2, "b"
is a positive number of 1.7 to 2.2, and the sum of a+b is 1.9
to 2.4,

- 15 (B) an organohydrogenpolysiloxane having at least two
hydrogen atoms bonded to silicon atoms in a molecule, in an
amount to give 0.1 to 5 silicon atom-bonded hydrogen atoms
per alkenyl group in component (A),

- (C) a platinum catalyst in an amount to give 0.1 to
20 1,000 ppm of platinum element based on the weight of
component (A), and

- (D) 0.0001 to 1 part by weight of at least one
compound selected from the group consisting of indoline,
1,2,3-triazole, 1,2,4-triazole, imidazole, indazole,
25 benzoxazole, 2-hydroxybenzoxazole, 5-benzyloxyindole,
1,2-benzisoxazole, 2,1-benzisoxazole, and 1,3-benzodioxole.

2. The composition of claim 1 wherein components (A) and
(B) contain low-molecular-weight cyclic siloxane fractions D,
30 to D₁₀ in a total amount of up to 1,000 ppm.
